12, 9, 5, 5, 1, 1, 1, 9, 1, 8

Restaurant  $\boldsymbol{B}$  replaces the knife when the durability of the knife reaches below 95%. Durability is defined as the proportion of the knife's original strength or effectiveness that remains after a certain period of use. The formula  $D(w) = 100(0.99)^{w}\,$  models the durability of a knife in Restaurant B, w weeks after the purchase. Data set  $\boldsymbol{X}$  represents the period of use of all 10 knives in Restaurant  ${\cal B}$  in weeks. How many knives in Restaurant  ${\cal B}$  are subject to replacement?
