Selected Projects

DFA for Numbers $\equiv 2 \pmod{5}$

Jan 2025

Implemented a deterministic finite automaton recognizing binary representations of integers congruent to 2 mod 5. Provided formal proof of correctness and state-minimality.

Graph Visualization Toolkit

Nov 2024

Developed interactive Python application using NetworkX and Matplotlib to model and visualize complex networks. Applied aesthetic criteria: minimized edge crossings and uniform edge lengths; demonstrated Shneiderman's principles.

Perl Automation Suite

Sep 2024

Created a suite of Perl scripts to automate file management, data parsing, and report generation, reducing manual workload by 80%.
